EDUCATION

University of California, Berkeley

May 2027

Bachelor of Arts in Applied Math & Data Science

Relevant Coursework: Data Structures & Algorithms, Calculus I–III, Linear Algebra & Differential Equations, Fundamentals of Data Science, Machine Learning

Activities/Societies: Data Science Society - Data Science Consultant, Colorstack - Member, USAPL - Powerlifter

PROFESSIONAL EXPERIENCE

ASSIST.org

Remote

AI & Frontend Developer - Contract

April 2025 – Aug 2025

- Led development of an **Agentic-AI counselor** using the **OpenAI Agents SDK**, designing multi-step reasoning **workflows** to guide students through transfer pathways and course-equivalency decisions.
- Built a **Node.js/React chatbot interface** serving students at **116+ California Community Colleges**, streamlining course-equivalency support and enhancing accessibility to personalized transfer guidance.
- Embedded **roadmap generation** using **Retrieval-Augmented Generation (RAG)** and vector databases to enable auto-creation of **semester-by-semester transfer plans** from CCs to UC/CSU.
- Organized and led **group studies** and translated feedback into prioritized agent behaviors and UI improvements; collaborated with PMs to embed agentic design principles, ensuring a scalable, intuitive UX for **100,000+ users**.

California State University, Los Angeles

Remote

Machine Learning Research Intern - Contract

Feb 2025 – June 2025

- **Developed a scalable ML framework** to optimize mass evacuation routes by predicting real-time traffic flow with TomTom API data using **LSTM, Gradient Boosting, and ensemble models**.
- Implemented advanced forecasting models, including **ARIMA, Gradient Boosting Regressors**, and **bidirectional LSTM**, integrating predictions through an **XGBoost meta-learner** to enhance accuracy and adaptability.
- Preprocessed and engineered features on **50,000+ traffic records** with Python (Pandas, Scikit-learn, TensorFlow).

Merced College

Merced, CA

STEM Tutor

Sep 2024 – June 2025

- Tutored **40+ students** weekly in CS, calculus, and statistics, tailoring explanations to individual learning styles.
- Developed supplementary coding exercises and visual aids, improving their average exam scores by **20%**.
- Collaborated with CS faculty to identify struggling topics and track progress using Google Sheets and weekly reports.

PROJECTS

Math SBAC Score Analysis in Stanislaus County, California

- Analyzed the impact of socioeconomic factors (family income, parental education, neighborhood characteristics) on student math performance in the SBAC standardized exam, uncovering patterns of inequity across districts.
- Collected and cleaned multi-source education and census datasets using **Python (Pandas, NumPy)** and performed **correlation analysis, regression modeling**, and **data visualization** with **Matplotlib/Seaborn**.
- Identified significant disparities in student math performance across school districts with varying income levels, generating broader insights into systemic educational inequities and their regional impact.

Personal Website Portfolio

- Developed a responsive **React portfolio** website showcasing expertise, projects, and skills.
- Implemented interactive UX elements, including contact forms with validation and project galleries.
- Deployed the site via a CI/CD pipeline on GitHub Pages, ensuring optimized performance, reliability, and SEO.

SKILLS

Languages: Python, SQL, Java, R, JavaScript, C++

Tools & Libraries: Pandas, TensorFlow, Jupyter Notebook, Power BI, Data Wrangler, Tableau, Excel

Platforms & Databases: AWS, MySQL, PostgreSQL

Web Technologies: HTML, CSS, JavaScript, Node.js, React
